

notorious J.I.G.

Tech Specs:

Sound

The band can provide 900 watts PA speaker system (Mackie SRM450v2) that is sufficient for an audience of up to 200 people in a medium sized indoor venue or marquee.

For larger audience sizes and venues; please get in touch to discuss requirements.

Mains Power

Minimum 2 x 240v mains power sockets situated within or close to the band/stage area.

If mains sockets are not available within the performance space, two long extension reels with four plug inputs will be required; these should be plugged into any available mains sockets and reeled out to the stage area.

Stage

We'll need a stage area: either on a permanent or built stage, or allocated floor space. We try not to take up too much space – e.g. a performance space of approx. dimensions 10ft length (3.4m) by 6ft width (1.8m) would be a minimum. Please contact us if you're unsure if the available space is appropriate.

Band Requirements

One straight backed chair for the accordionist

4 bottled waters

Food is much appreciated but not obligatory
